## [Case Preview]

Minimally Invasive Approach to Immediate Implant Placement on the Mandibular Anterior Area

### **Patient Information**

**Age** : 52

Sex : Female

#### **Chief Complaint**

I have severe mobile tooth

in my lower jaw,

and I want to get it fixed.

#### **Past Dental History**

- A fixed retainer is placed in the maxilla.
- The mandibular anterior teeth are stabilized with a wire splint.

#### **Present illness**

- Severe chronic periodontitis with advanced alveolar bone loss on #31, #32, #42, #37.
- Wire splinting on #32 #42.
- Missing on #41.
- Deep bite

### **Today's Surgery Plan**

#### **Surgical Plan**

Flapless immediate implantation on #32 and #42 using pin guide
with bright Tissue Level implant accompanied with bone grafting

#### **Prosthetic Plan**

- 4 unit bridge of #32 - #42 on 2 implant #32 and #42

#### Pin insertion planning

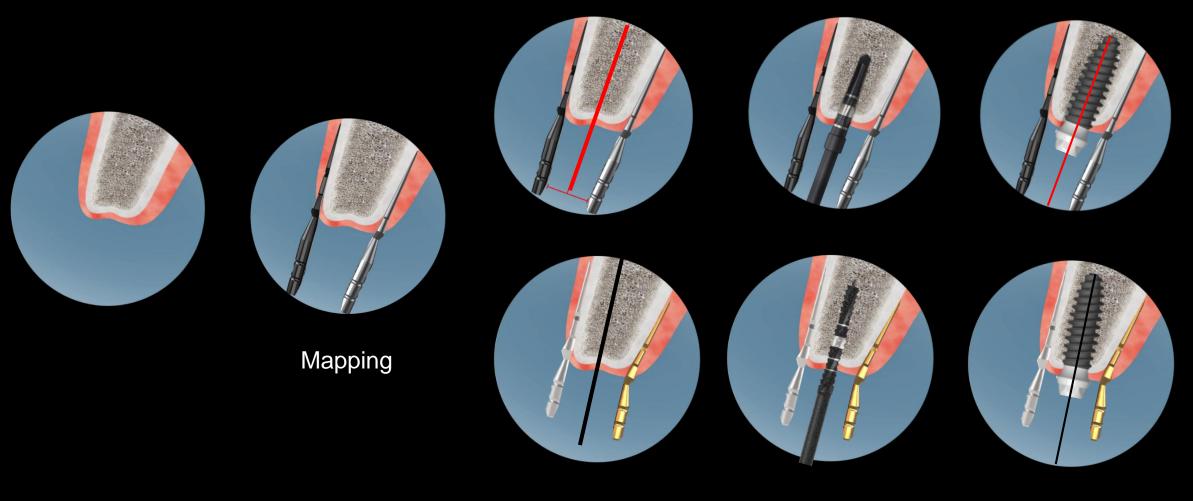

# Pin Guide Bone Mapping

- Highly optimized for flapless and immediate Implant placement
- Especially effective in Anterior and Premolar regions

# Pin Guide Surgery

Planning

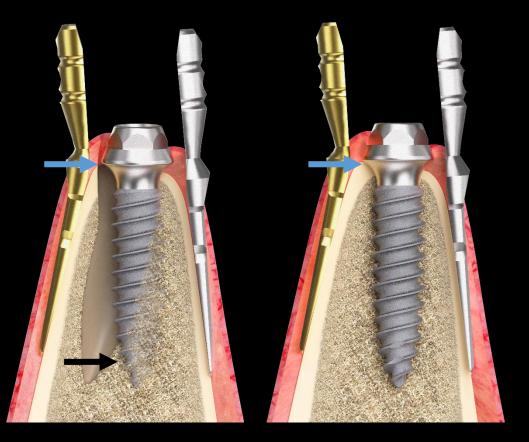

Drilling

Implant Placement

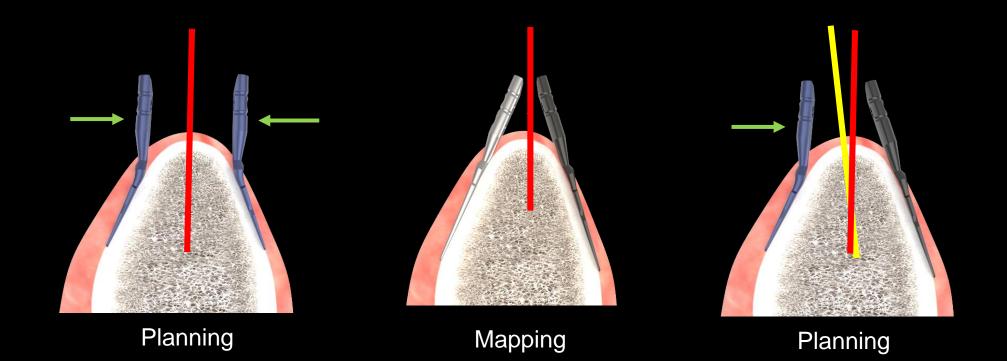

# bright Tissue Level

- Thin & Deep Thread Design

- Easy Implant placement
- Good Initial Stability
- Bone-Implant Contact area ↑
- Preserving alveolar bone
- Stability of Immediate loading

# Pin Guide System

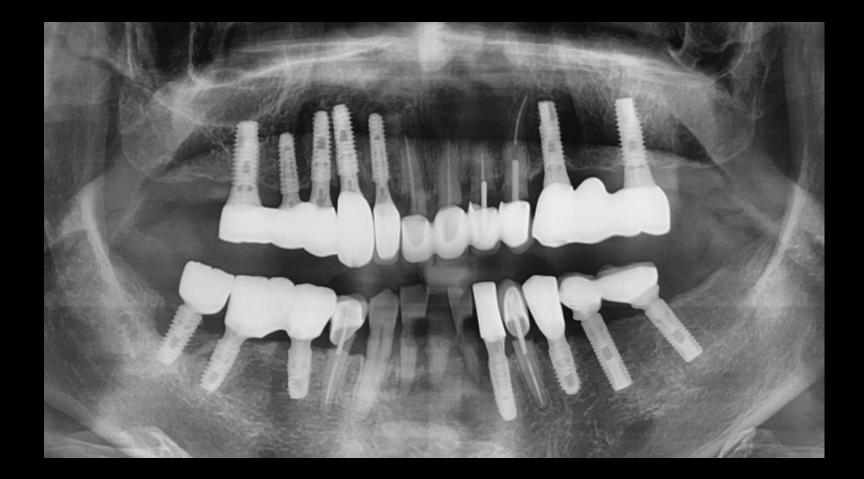

## **Components of Pin Guide System**

#### Immediate Implantation on Mandibular Anterior Area Using Pin Guide
